

## Geometric Dimensioning and Tolerancing Professional (GDTP) Certification Preparation

### 3-Day Seminar

(~24 hours of instruction; 2.4 CEU's)

#### Course Description

This program is designed specifically to enhance your potential for passing the [ASME Geometric Dimensioning and Tolerancing Professional \(GDTP\) Certification Examination](#)

#### Objectives

1. Identify and correct your specific weaknesses in your understanding and application of GD&T.
2. Understand the GDTP Certification Exam layout and question structure.
3. Compare your sample exam results with the standard and with colleagues.

#### Benefits

AGI has a high percentage (95-98%) of our GDTP Certification Prep students passing the ASME exam on their first attempt. This program benefits all who are interested in taking either the Technologist or Senior level of the exam.

#### Program Outline

This course is a technical review based on the GDTP Pretest administered on day one, as well as an overview of the real ASME GDTP exam. Practice exams will be given and reviewed in class to determine your personal strengths and weaknesses in GD&T and to give each participant the ability to systematically prepare for the GDTP exam.

*AGI is dedicated to continuing service. Our concern is that the individuals we teach actually retain that which their companies and we have worked so hard to present. This is precisely why we offer, for each participant of any AGI seminar, access to an ASME GDTP Senior certified instructor who will be available to answer follow up questions after the course via e-mail or phone.*

#### Class Bonuses:

- A copy of the ASME GDTP Certification Exam informational brochure and the appendices of the ASME Y14.5.2 GDTP Certification Standard listing the "Body of Knowledge" will be provided.
- The program instructor will be available for post-program questions via phone or e-mail.
- AGI guarantees that you will be allowed to retake this program **free** until you pass the exam.

#### Who Should Attend

This program is designed for anyone preparing for either the Technologist or Senior Level ASME GDTP Certification Exams.

#### Prerequisites

This is **NOT** a beginner program! You should already have a thorough understanding of the majority of the ASME Y14.5 Standard before attending this program. We strongly suggest that you attend or have been trained in or be experienced in the equivalent of AGI's Fundamentals and Advanced GD&T courses as a minimum. The equivalent of AGI's Tolerance Stack-Up Analysis courses will also be helpful before attempting to take this program or before attempting to take the GDTP Certification Exam. Should you have any question about these prerequisites AGI will put you in touch with the instructor.
